

Helping business optimize  
their IT solutions

# Welcome to *Telsist Communications*

"The most successful businessman is the man who holds onto the old just as long as it is good, and grabs the new just as soon as it is better."

Robert P. Vanderpoel

## **Business continuity:**

is the activity performed by an organization to ensure that critical business functions will be available to customers, suppliers, regulators, and other entities that must have access to those functions.

**Business Continuity is not something implemented at the time of a disaster.**

Rather, business continuity refers to those activities performed daily to maintain service, consistency, and recoverability.

The world of Information Technology has grown and diversified from its humble LAN beginnings. Digital innovation and more importantly, the adoption of cloud computing, has created a greater dependency on IT technology. Businesses spanning all industries require some form of IT to maintain their daily operations and ensure continued growth.

In a fast-paced world, often it is the cost and the complexity of IT that becomes the roadblock to a business's growth and continuity. Increased pressure to justify the ROI of IT budgets, mixed computing environments, exacting security and data compliance, and keeping current with evolving IT has left many companies grounded with outdated IT resources.

As a **Managed Service Provider (MSP)**, Telsist has the unique advantage of operating its own Tier 3 data center. Our focus is simple; **business continuity**. With smart, effective, cost-saving managed IT services Telsist is positioned to help your team focus on growing the business and not on managing the company's IT infrastructure.

## ***Support your business with Telsist***

Telsist understands how the lifeline of your IT network is essential to your company's continuity. We firmly believe that your time and money is better spent on attaining business objectives and not in maintaining your IT infrastructure.

Partnering with leading industry developers combined with a knowledgeable team of network specialists, Telsist is positioned to offer smart managed IT services that are tailored to help your business realize its full potential.

What distinguishes our work from the competitors? Simply, Telsist operates its own data center. When evaluating a managed service provider, you want the assurance that it takes responsibility for the data center your data resides in. Above all, owning its data center allows Telsist to quickly tailor managed services to fit your company's IT needs and budget.

### ***Telsist data center technology gives you peace of mind.***

- secure center equipped with video surveillance and keyless entry
- battery UPS, natural gas backup generator, Fireflex pre-action system
- redundant dual Fiber entry with 1 Gbps capacity
- state-of-art IBM servers
- current IT hardware & software technology
- knowledgeable and certified technical & security experts

***Maintain the focus on managing your business objectives, not your IT.***

***Contact Telsist and learn how we can help you optimize your IT infrastructure.***
